

Prime Cloud

How to get started (for applicants)

1

Tell us about your company

Answer a few questions so we can determine if we're able to provide coverage.

2

Get help from your AWS administrator

Your AWS administrator is the tech person who manages your accounts on AWS, will provide information about your AWS accounts, and has the rights to deploy AWS Security Hub.

3

Complete detailed risk assessment

Your AWS administrator will install Cyber Guardian Scanner so that we can scan your AWS configuration and provide a risk assessment and a quote.

4

Get your quote

Cowbell Cyber will give you a quote based on the security configuration of your deployment on AWS.

5

Purchase!

Review your coverage options, select your deductible and enter your payment details to confirm your insurance policy.

6

Get AWS Security Hub and Activate continuous risk monitoring

Activate AWS Security Hub and install Cyber Guardian Continuous Monitoring to keep an eye on your cyber risk exposure and take action if any vulnerabilities should show up.
